INSTAL

BEJS-ON-A-REEL

DO NOT INSTALL THIS MATERIAL UNTIL ALL MEMBERS OF YOUR CREW HAVE READ AND UN-DERSTAND THESE INSTRUCTIONS AND ALL RELEVANT SAFETY DATA SHEETS. IF YOU DO NOT UNDERSTAND ANY PART OF THESE INSTRUCTIONS CALL EMSEAL AT **1-800-526-8365**

BEJS Pre-Install Equipment Checklist

In addition to safety equipment required to comply with applicable federal, state and local safety regulations, equipment to prepare and repair the joint-faces, as well as normal tools of the trade, the following are required:

- □Duct Tape (2 ½ times the length of joint)--<u>optional</u>--if you care about masking the joint for drips.
- □Tape measure
- □ Sausage caulk guns to hold 20-oz silicone sausages
- □Sausage-gun nozzles (cones)
- □Long-bladed, serrated bread knife
- □Chemical-resistant gloves
- □ Caulk knives for tooling sealant bands
- □ Acetone or effective alter native solvent for cleaning joint-facesand tools.
- □ Clean <u>lint-free</u>, 100% cotton rags

MATERIAL STORAGE:

<u>Cold Days</u>: Store material, off the floor, inside at above 68°F (20°C). It will recover slower when cold and faster when warm.

<u>Very Hot Days</u>: Keep material out of direct sun when the temperature is greater than 80°F (27°C) until immediately prior to installation.

Step 1: Joint Prep

- Ensure joint faces are parallel and have sufficient depth to receive the full depth of the size(s) of BEJS-ON-A-REEL being installed <u>plus</u> at least 1/2-inch (12mm).
- Repair spalled, irregular or unsound joint surfaces using accepted industry practices for repair of the substrates in question. Remove protruding roughness to ensure joint sides are smooth.
- Ensure joint sides are dry of solvent or cleaning agent prior to installation.

- Remove residues of old sealants.
- Apply solvent or other agent suitable for use on the substrates to clean, lint-free rags.
- Wipe joint faces to ensure joint sides are free of dust, previous sealant, oils, grease, etc.

- Load the sausage into the sausage gun.
- Cut off the top of the sausage to allow the sealant to flow.
- Attach the nozzle tip.

Step 2: Apply Installation Sealant Band ——

8 3/8" = mounting bead of liquid sealant

- Gun a 1/4" (6mm) wide mounting bead of sealant onto each joint face, about 3/8" (8mm) back from the joint edge.
- Strike the mounting bead of liquid sealant with a caulk knife to ensure that it is continuous, even, and properly bonded to the substrate.

Step 3: Select and Open Material

- Open a box marked with a material size to match the joint size.
- Remove a reel from box

 Cut the packing tape at the beginning of the roll.

ON-A-REEL.

NOTE: Be sure to cut away

from the product so you don't

slice into the side of the BEJS-

- RECESS BEJS 1/2" (12mm) from the surface.
- Work your way along the joint pushing on the material while inserting it.

Step 5: Insert Material Into Joint

• Uncoil the first end from the reel.

 Insert the end into the bottom of the joint. leave the end of the material sticking out of the joint about 3/4" (20mm).

• Remove the release liner as you go.

• Peel back the packing tape and release liner at the beginning of the reel.

- Extend the blade on your long-bladed utility knife.
- Using a back and forth "sawing" motion, square off the end of the material. Wetting blade with water will facilitate cutting.

EMSEAL JOINT SYSTEMS, LTD 25 Bridle Lane, Westborough, MA01581 EMSEAL, LLC 120 Carrier Drive, Toronto, ON, Canada M9W 5R1

- REMEMBER: ALWAYS PUSH, Never Pull. Do Not Stretch the material.
- By pushing on the material it will "snake" into the joint from side to side.
- As it expands to fill the joint, it will also push along its length ensuring the joins and ends are a tight fit.

PH: 508.836.0280 FX: 508.836.0281 Toll Free: 1-800-526-8365 PH: 416.740.2090 FX: 416.740.0233 Copyright © 2014 by EMSEAL JOINT SYSTEMS, LTD. All Rights Reserved

Step 4: Wet Seal the Starter End

• On the starter piece, apply a bead of sealant along the

silicone coating

Cut Material Slightly Longer Than Needed

- Cut each run of material about 3/8" (8mm) longer than needed.
- "Snake" the excess into each run.

Joining Straight Lengths

• At the end of a roll, leave the end of the material sticking out of the joint about 3/4'' (20mm).

• As in Step 4, apply a bead of sealant along the silicone edge.

 Tool away the excess joining sealant and blend the join.

• Insert gun tip between edge and substrate. Apply a corner bead of silicone.

• Tool the top edge of the sealant

silicone bead to a smooth blend

- Open another reel, square off the end, and join it to the piece sticking out of the joint.
- Push pieces firmly together.

 Install the rest of the joint run then come back and push the join into the joint recessed 1/2" (12mm) from the surface.

EMSEAL JOINT SYSTEMS, LTD 25 Bridle Lane, Westborough, MA01581 EMSEAL, LLC 120 Carrier Drive, Toronto, ON, Canada M9W 5R1

- Any exposed end of BEJS must have its exposed vertical face covered with a coat of silicone. Apply silicone to this face.
- Smooth surface of silicone with caulking knive and insert end back into the joint.
